

How to Export your Badaboom! Quiz to Another Computer

Website: badaboom.hk

After you have completed your quiz, the Badaboom quiz will automatically be stored in the browser of your computer. You can retrieve it anytime when you access Badaboom using the same browser. Note: the quiz will be automatically saved in your browser unless you clear your web browser's cache, cookies and history.

However, if you would like to save your quiz to share or use on another computer at a later time, you will need to export your quiz. The export function allows you to export your quiz content as a .json file. To do this, follow these two simple steps:

STEP 1: Click “Export quiz”, to download the JSON file (.json) and save it on a device or known location for import later.

STEP 2: To use the quiz on another computer or to share it, you just need to import the quiz by clicking on “import” and selecting the saved .json file. Make sure to give a new name for this quiz.
